

The MGH Global Medicine Concentration develops global health leaders committed to health equity.

The Concentration is a joint initiative of the MGH Department of Medicine and the MGH Center for Global Health. Embedded within the Categorical Training Program, the MGH Global Medicine Concentration seeks to train global health leaders who across resource settings are outstanding internal medicine clinicians committed to health equity with the ability to:

- Creatively engage the health of patients and communities with an understanding of social and historical context
- Establish and sustain global health partnerships
- Lead systems change

Structure

The Global Medicine Concentration provides residents with the expertise and flexibility to cultivate their individualized career paths in global health. Global Medicine trainees have the opportunity to develop their global health careers through:

- Clinical training in internal medicine focused on health care delivery, policy, implementation and evaluation for underserved populations in Boston and around the globe
- Structured, intentional mentorship and support from a global health community across MGH, Harvard, Boston and beyond
- Participation and leadership in the annual MGH Global Medicine Course
- Opportunities for away rotations during each year of residency
- Global health leadership training
- Global health research seminars

The concentration promotes the development of future leaders to advance health equity through intentional mentorship and community, longitudinal global health experiences, institutional partnerships, global health didactics, and the autonomy to shape your own career path.

Mentorship

In collaboration with the MGH Center of Global Health, the Global Medicine Concentration provides each resident with individualized mentorship. Mentors support each resident in identifying scholarly and research opportunities that best suit their academic interests and career aspirations within global health.
